

Event Group – Mobile Public Address Caravans

*Event Services pioneered the very first mobile PA units for Fetes, Sporting events and occasions way back in 1976. Our latest units feature the most modern equipment and have been refined over the years to provide **reliable, simple to use and yet very efficient, high quality Public Address audio.***

The latest in our fleet of Public Address Caravan (as shown above with both Hi-Fi / music quality and PA horn speakers) has the following features:

Standard 'PA' Mode – A powerful **200 watt mixer amplifier**; Built in **Media player** which can take normal **CD's, MP3 discs, SD card or USB** input for any type of modern media; An additional input via mini headphone plug for your iPod or Laptop if you have music in such a format; **One Radio microphone** (operational range up to 200 metres depending on conditions); **One fixed cabled microphone**; 4 very efficient, long range **horn speakers** which can provide crisp, clear vocal projection over many hundreds of metres.

Upgraded Music Mode – the horn loudspeakers are substituted for high quality, all-weather **cabinet loudspeakers** which give a much higher quality music reproduction, but this does reduce the range of audibility.

ALL systems operate on their own **internal batteries**, or can run on mains electricity if available. In the event of mains failure the system automatically reverts to battery operation so communication is never lost.

There are many options we can offer with the PA caravans – they have been designed for versatility, and we pride ourselves on the quality, reliability and audibility of our systems. 3 different sized Caravans are available depending on application and access.

Please discuss your exact requirements with us and we will ensure you get the right equipment for your event.

Important Note: our Media Player is a 'state of the art' unit with electronic anti-shock and track recovery built in to the cd player, however, operating with cd's in fields, outdoors etc. the cd itself is very susceptible to dust, dirt, moisture etc. and we recommend using digital media such as an iPod or the SD card or USB facility for ultimate reliability.
